Questionnaire and Answer

Question 1:

"What inspired or sparked your interest in becoming a Computer Engineer?"

Answer 1:

Siguro ano, nag-start siya nung bata ako kasi na-expose ako sa computers at a young age. Parang nagsimula siya sa naglalaro ko, 7 years old. Then nagkaroon ako ng experience na nasira yung computer namin nung bata pa ako. Then trying ko siyang gawin and ayun, for some reason nagawa ko siya. Then dun nag-start yung interest ko pagdating sa computers. Parang ayun, kasi normally lagi talaga ako gumagamit ng computer. Hanggang sa nung maging college na ako, then abang nag-aaral ako, ginagawa ko siyang parang sideline. Baga gumagawa ko ng computers, nagre-repair yan. Then ayun, pinurso ko na siya nung college.

Question 2:

"What are you currently doing now? Are you working on any projects, events, or are you currently employed?"

Answer 2:

I'm currently employed at PASI. Ang job ko dun is I'm an implementation specialist. Mainly yung company namin is focused on POS system din. Ang work ko is both hardware and software from hardware setups, server setups, networks, and Windows configuration, hanggang dun sa ERP namin, which is yun yung binibenta namin sa mga clients namin. Ayun, then maraming na rin akong handle na clients, mga client namin such as Starbucks, HealthyOptions, Armynavy, and yung The Bistro Group. Ayun, and ayun, mayroon pala akong business, small business na parang siyang ano, mga shop sa Gilmore, ganyan. Then ako yung nagre-repair, gumagawa ko ng mga devices, mga computers, laptops, printers, and desktops, and mobile devices.

Question 3:

"What advice or tips can you give to us who are about to graduate and start our journey in Computer Engineering?"

Answer 3:

Ano, siguro wag mag-procrastinate. Kasi lahat naman siguro tayo nag-struggle sa ganun, pero kapag pumasok na sa iyo yung thought na kailangan mo itong gawin, gawin mo na siya kasi parang, ayun nga, abang nadedelay siya, mas nahihirapan ka. Tsaka siguro ang hindi ko nagawa dati nung nag-aaral ako is mag-advanced study. Iyon yung malaking bagay na parang pinagsisiyan ko kasi may mga bagay akong late ko na natutunan, minsan natutunan ko na lang siya sa work kasi hindi ko siya inaral, or minsan hindi ko pinagtunan ng pansin, yan. Siguro yun. Tsaka ayun, matutunan nyong mahalin yung course nyo. Kasi, ayun, nakaka-enjoy naman siya. Although mahirap kasi engineering siya eh, diba? Engineering course, pero ano lang, parang

tsagalang, tsaka effort. And ayun, marami na rin maximize nyo lang yung tools. Especially mga YouTube, lalo na ngayon may mga AI na mas madali na. Pero ayun, iba pa rin yung, pero try pa rin yung best na matuto on your own. Parang guide lang, more on guide lang sila.

Reflections

Malbas, Sean Gilmar P.
CPE11S2

- I learned a lot from Mr. James when he shared his challenges and tips. It was an eye-opener for me that when you follow your dream, you enjoy what you do, even when the work gets hard. Passion makes the effort feel meaningful instead of tiring.

He also showed me that learning does not stop in school. We can learn from anyone, anywhere: from our boss, our peers, and even our clients. Each person has experiences and perspectives that can teach us something new. From this, I realized that I should stay humble, listen more, and be open to feedback, because every workplace is also a classroom.

The tip that struck me most was about procrastination, because it is my own problem. Sometimes I start a task and then forget why I am doing it, and I lose motivation along the way. Mr. James told us to just focus, because "4 years lang yan" (it is only four years). That made me see that my time in college is short compared to the rest of my life, and the effort I put in now will shape my future career. Instead of delaying my work, I should use this time to build good habits, finish my tasks on time, and remind myself of my purpose whenever I feel lost.

From now on, I will apply his advice by setting clear goals for each task, writing down my reason for doing it, and avoiding distractions that waste my time. I am grateful to Mr. James for sharing his experiences. His words motivated me to stay focused, keep learning, and work hard toward my dream.
